

## Gorilla<sup>®</sup> NC Fusion Plating System

### PRODUCT INFORMATION

#### Features and Benefits

- **Guided Screw Targeting** - simplifies screw placement  
 - helps to ensure fixation is achieved in highest quality bone
- **Anatomic Plate Contouring** - cylindrical curvature allows for minimal manipulation of the plate to conform to anatomy
- **Templating Trial System** - allows for intraoperative trialing to help ensure plate and screws are positioned to achieve best fit and intended compression
- **Compression Through and Outside the Plate** - designed to maximize distribution across fusion sites

#### Gorilla<sup>®</sup> NC Fusion Plates

- Anatomically Contoured - Left and right specific
- Compression achieved across multiple joints
  - The patent-pending NC Plate with PRECISION™ Guide technology allows for a crossing screw that passes from the medial cuneiform to the lateral aspect of the navicular
    - 3.5 mm, 4.0 mm, 4.5 mm or 5.5 mm Monster<sup>®</sup> or Mini-Monster<sup>®</sup> screws
  - Proximal medial navicular to the intermediate cuneiform
  - Second locking screw in the navicular helps guard against plantar gapping
  - Two distal screws in the medial cuneiform have the ability to be placed across one, two or three cuneiforms
- Built in alignment templating
  - Laser marks provided as a parallel reference guide to the Naviculocuneiform joint
  - K-wire holes provided to show screw trajectory prior to plate placement
- 2.7 mm, 3.5 mm, 4.2 mm Gorilla<sup>®</sup> R3CON and TUFFNEK<sup>®</sup> screw options

### Gorilla<sup>®</sup> NC Fusion Plating System

	Small	Medium	Large	Extra Large
Total Plates	2	2	2	2
Plate Length	28 mm	30.5 mm	33 mm	35.5 mm
Plate Thickness	1.5 mm	1.5 mm	1.5 mm	1.5 mm
Left and Right Offerings	Yes	Yes	Yes	Yes

# Gorilla<sup>®</sup> NC Fusion Plating System

## SYSTEM SPECIFIC INSTRUMENTATION:

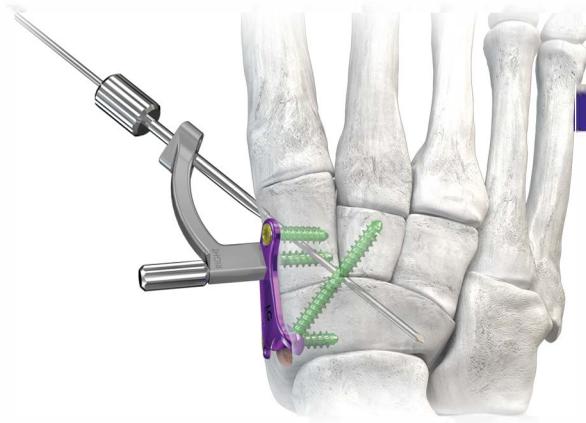

### NC Fusion Plating Template

- Left and right specific
- 4 corresponding trial templates offered for each plate size
- K-wire/olive wire holes provided for easy and reproducible transfer from template to implant
  - One slotted hole for easy template removal
  - Multiple 1.4 mm holes for provisional fixation

### PRECISION™ Guide - NC Fusion

- Patent-pending guide allows for placement of cross-screw across the arthrodesis while maintaining on-axis placement of plate screws
- Provides three trajectories of guide wire paths for variations among patient anatomy
- PRECISION™ Guide allows for 3.5 mm, 4.0 mm, 4.5 mm or 5.5 mm cannulated Monster<sup>®</sup> or Mini-Monster<sup>®</sup> screws

### JOINT PREPARATION

### Honey Badger Cartilage Removal Tool

- Provides “reverse cutting” functionality
- Ideal for debridement of curved, small and/or difficult to access joints

NCFPS-01 RevC

### COMPRESSION/DISTRACTION

### Caspar Device

- Can be secured on either side of the plate or bone fusion site using K-wires
- Attaches to the plate to create in-line compression
- Compression and distraction capabilities

### Pin Distractor

- Accommodates both a 1.6 mm and 2.3 mm K-wire
- Creates an opening up to 28 mm
- Allows for greater exposure to joint spaces to aid in removal of osteophytes and cartilage
