

PRECISION® PUSHER

Paragon²⁰
a  ZIMMER BIOMET company

WIRES FIRST. SIMPLE. FAST. RELIABLE.

ENGINEERED FOR EFFICIENCY IN 1ST METATARSAL HEAD TRANSLATION

The Precision® Pusher is a purpose-built instrument designed to streamline forefoot correction procedures.

With intuitive control, radiolucent design, and an optimized paddle interface, it simplifies complex maneuvers while maintaining full anatomical visualization.

PRECISION BY DESIGN. PERFORMANCE IN ACTION.

The Precision® Pusher redefines simplicity in surgical correction — designed for speed, visibility, and control, giving surgeons confidence from start to finish.

Key Features:

- ▶ **Simple:** Single-knob control enables precise, smooth translation of the 1st metatarsal head — up to 33 mm — with one-handed operation.
- ▶ **Fast:** With proper exposure, the device secures effortlessly: one hook into the canal + two wires to hold position = quick, stable setup.
- ▶ **Unobstructive:** Constructed from radiolucent materials, improving operative fluoroscopic visualization for optimal anatomical alignment.
- ▶ **Optimized Contact:** A carefully contoured paddle surface mirrors the curvature of the 1st metatarsal head for stable, even contact and reliable positioning.
